USING THIS USER GUIDE

This user guide is designed to familiarize new users with the Applet charting tool interface. Through this user guide, user will learn and understand the various features and functions offered.

If you discover any error in this user guide, please contact us at:

UOB Kay Hian Hotline Services

Tel: 021 299 33 999

Email: utrade-cs-id@uobkayhian.com

Please include your trading account number and contact number in your email.

Operating hours: 8:30am - 4:30pm from Monday - Friday, except Public Holidays.

SYSTEM REQUIREMENTS

To ensure that you are able to running the Applet smoothly, please check that your computer system meets the following requirements:

Java Runtime Environment (JRE) or Java Development Kit (JDK)	JRE or JDK 1.5 or higher version.
Speed of Processor	Pentium 750Mhz or equivalent upwards
Memory (RAM)	128 megabytes (MB) RAM (256 MB recommended)
Display Resolution	Super VGA (1024 x 800)
Hard Disk Space	At least 100MB
Peripherals	Mouse and keyboard
Internet Connectivity	Used for downloading stock data. The connection can be broadband/dial-up

*Some functions may not work in Safari and Chrome browsers.

GETTING TO KNOW THE TECHANALYZER

The TechAnalyzer is a web-based stock screening tool based on the popular field of technical analysis. It comprises of the following two modules: **Top Strategies** and **My Strategies**.

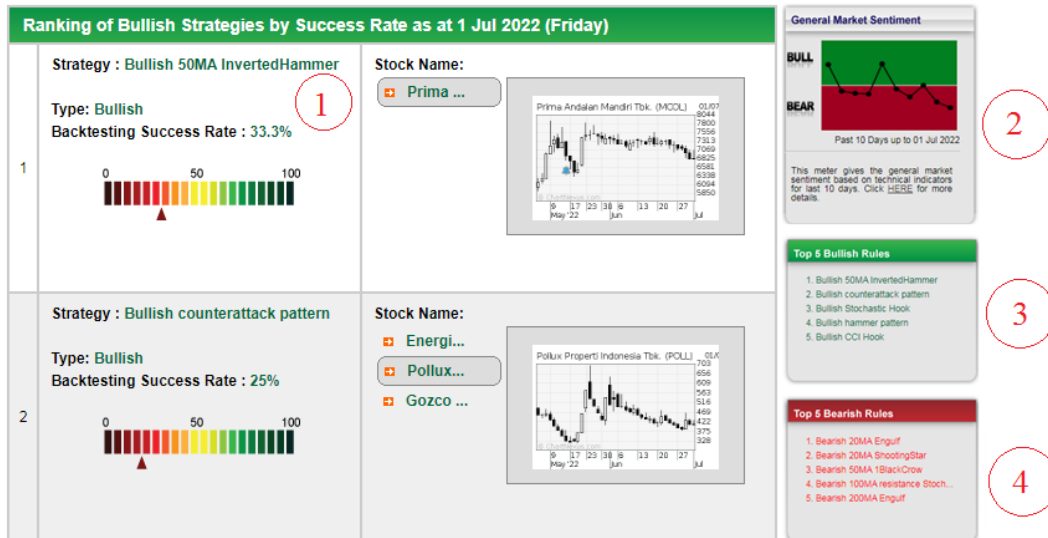

The **Top Strategies** selects stocks according to the technical strategies that have worked best in the recent 10 days. Hence users of all levels may harness the full power of technical analysis. For users who are looking to customize their own trading strategies, the **My Strategies** module allows them to do just that. With a comprehensive list of technical indicators such as moving averages, MACD, RSI, Stochastics, investors may customized their own strategies according to different market conditions.

The tool which is written in the Java™ programming language, provides you with an essential set of indicators and annotation features. With its user-friendly graphical user interface and easy navigation, you can chart stocks that you're interested in different chart types, set your own parameters for the indicators instead of using the default etc.

WORKING WITH THE TOP STRATEGIES

Now let us take a look at the features and options of the Top Strategies Tab

The screenshot below illustrates a comprehensive summary page of the Top Strategies

- 1 Table that highlights the stocks that fall under the top 5 bullish strategies and the strategies will be ranked according to their success rate over the past 10 days.
- 2 General Market Sentiment gives the user the degree of bullishness and bearishness in the market. This is achieved by determining how many counters display bullish signs versus the number of counters that display bearish signs. If the indicator is in the green (bullish) territory, this indicates that more stocks are displaying bullish technical signals. If the indicator is in the red (bearish) territory, this indicates that more stocks are displaying bearish technical signals.
- 3 Table that highlights the top 5 bullish strategies and they will be ranked according to their success rate over the past 10 days. (Number 1 being the best)
- 4 Table that highlights the top 5 bearish strategies and they will be ranked according to their success rate over the past 10 days. (Number 1 being the best)

TO VIEW PAST RESULTS

THE CHARTING TOOL

Another powerful feature of TechAnalyzer will be its ability to chart individual stocks.

To launch the charting tool from the TechAnalyzer, click on the **CHARTS** option which is located at the top.

The tool which is written in the Java™ programming language, provides you with an essential set of indicators and annotation features. With its user-friendly graphical user interface and easy navigation, you can chart stocks that you're interested in different chart types, set your own parameters for the indicators instead of using the default etc.

To find out the information about the features and options for plotting charts, click on the  option in the chart area .

The screenshot below illustrates the chart area.

- 1 Tab showing the name of the stock. When you double-click on any stock/company on the stock list, the chart will be shown in the chart plotting area.
- 2 Indicator selection area. This is where you can choose which indicator to add to the price chart.
- 3 Chart plotting area. This is where the data is converted to become a chart and where you can draw lines, add text etc. on it.
